LiuGong Names New Chairman of North American Company

Guangxi, PR China – June 4, 2010 – LiuGong Machinery Corp. announced that James William Donoghue has been named Chairman of the Board of Directors for LiuGong Construction Machinery North America.

Mr. Donoghue joined LiuGong in 2008 as President of LiuGong Machinery, Latin America. In his new role he will be responsible for all expansion strategy and for achieving strategic plan objectives for LiuGong for both North and South America. Donoghue follows Mr. Bi Haidong, the previous Chairman, who has been promoted to another position within LiuGong.

“This appointment reflects LiuGong’s commitment to further expand its performance in the global market. The board is delighted to welcome Mr. Donoghue as the new Chairman of our North American company,” said Mr. Wang Xiaohua, Chairman of LiuGong.

Donoghue has more than 25 years experience in leadership roles within the construction equipment and material handling manufacturing industries. He has worked for the world’s top equipment brands, including Case, Ingersoll Rand, Hyster and Yale and now LiuGong. Donoghue brings deep international experience and engineering, sales and marketing expertise to LiuGong, enabling him to grow profits at every single company where he has served. This includes a proven record in launching products globally.

Donoghue received a BS in Agricultural Engineering with an emphasis on power and machinery from the University of Illinois School of Engineering. He went on to obtain an MBA from Webster University’s Graduate School of Business.

During his initial two-year assignment with LiuGong, Donoghue led the opening of LiuGong’s Latin America subsidiary, introduced numerous new products into the Brazilian market and last year and led the company to a nearly 40% increase in unit sales.

Donoghue notes LiuGong is still a newcomer in the U.S. market, and near-term plans include getting LiuGong products more exposure.

“In North America, it’s still early for us,” Donoghue said. Currently, LiuGong sells wheel loaders, excavators, backhoes, skid steers and compaction equipment in the U.S. and Canada. “We have a dozen dealers and we’re expanding that base. By the end of the year, we’ll have many more dealers than we have now.”

He noted the market is picking up for LiuGong. “People are interested in what we have to offer and interested in investing in construction equipment again. It’s better than it was a year ago,” Donoghue said.

LiuGong’s approach to growth is tied to a strategy of carefully expanding its global footprint. Five LiuGong subsidiary companies are strategically located to provide expert support to more than 119 dealers worldwide. These regional offices are staffed with engineers, technical experts and sales and marketing support. The regional offices of the subsidiaries include LiuGong North America in Katy, Texas, LiuGong Latin America in Belo Horizonte, Brazil, LiuGong Europe in The Netherlands, LiuGong Australia in New South Wales and LiuGong India in New Delhi, India.

“Our North American customers are pleased with the level of service and support provided by LiuGong. We have the investment into sales and support that customers here expect. We have high quality machines with great performance that are both easy to own and operate. What we really emphasize is that LiuGong brings the complete package,” Donoghue said.

LiuGong Machinery Corp., headquartered in Liuzhou, China, has produced high quality construction equipment for more than 50 years and is expanding globally. LiuGong is the largest producer of wheel loaders in the world with a nearly 18% share of that market. In 2009, LiuGong had \$1.49 billion USD in sales, producing more than 38,000 units from 16 factories. LiuGong is China’s premier heavy equipment manufacturing firm and is the 21st largest construction machinery company worldwide. LiuGong offers a

full line of machines including wheel loaders, bulldozers, backhoes, skid steers, forklifts, graders, excavators, rollers, truck mounted cranes, pavers and milling machines.

-MORE-

The firm employs more than 10,000, including more than 650 R&D engineers and employs experienced professionals from around the world into its management, marketing and engineering ranks.
